PROFESSION SUMMARY

AI practitioner and communicator who builds real systems RAG pipelines, agentic workflows, LLM automations then explains them clearly to developer audiences. Bridging technical depth with accessible education.

TECHNICAL SKILLS

- Generative AI & LLMs:** RAG pipeline design (ingestion, chunking, embeddings, indexing, retrieval), LlamaIndex, LangChain, Agentic Workflows (multi-step tool use, conditional routing, fallback logic), Prompt Engineering & Versioning, Semantic Search, Vector Embeddings
- Agentic Automation & Integrations:** Tool-using AI agents, multi-node conditional workflow design (n8n Switch/Merge routing), API integrations (Slack, Gmail, Airtable), closed-loop automation with error handling
- AI/ML Frameworks:** NLP, Transformer Models, Deep Learning (PyTorch, TensorFlow), Scikit-Learn
- Languages & DB:** Python, SQL (MySQL)
- Automation & DevOps:** n8n, API Integrations (Slack, Gmail, Airtable), Git, VS Code, Jupyter Notebook

PROJECTS

QA System Using Llama Index & Google Gemini (RAG)

- Built and documented a production grade RAG system can explain every design decision, tradeoff, and failure mode to a developer audience.
- Optimized retrieval relevance and context precision by implementing dense vector embeddings and semantic search methods, reducing generation hallucinations and providing accurate, context-based answers.
- Engineered end-to-end document indexing workflows, establishing highly structured vector stores to achieve low latency inference across multi-format text corpora.
- Tools used:** Python, Llama Index, Google Gemini, Vector Embeddings, NLP processes.

Customer Feedback Form (AI Automation)

- Designed and shipped an end-to-end agentic automation wrote documentation explaining the architecture for non engineer stakeholders.
- Constructed complex, non-linear conditional data routing architecture utilizing multi-node data streams (Switch and Merge nodes) to seamlessly synchronize structured pipeline outputs across Airtable CRM and target Slack channels.
- Automated closed-loop consumer engagement by orchestrating the Gmail API to generate and dispatch secure, context-aware, personalized resolutions for high-priority complaints.
- Tools used:** n8n, AI Agents, Google Gemini, Airtable, Slack, Gmail API.

EXPERIENCE & TRAINING

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                            |
